```python
In [2]: def longestWord(wordList):
            longestWord = ''
            for word in wordList:
                if(len(word)>len(longestWord)):
                    longestWord = word
            return longestWord

In [3]: print(longestWord(['today','is','not','friday']))

        friday
```
